The AI Money-Leak Checklist

This is the exact first pass I run on a business before I quote anyone. Print it, grab a pen, and answer honestly. It takes about 10 minutes. Two sections: where AI and tools are quietly **costing** you money, and where AI could be **making or saving** you money you're leaving on the table.

Check the box if the statement is true for your business right now.

Section A, The Leaks (where money is quietly draining)

✓ Check	
☐	You pay for two or more tools that basically do the same job.
☐	Nobody on your team can tell you what your chatbot or automation actually did last month.
☐	You bought ChatGPT, Copilot, or similar seats and fewer than half your team logs in weekly.
☐	An automation broke and you found out from a customer, not a dashboard.
☐	You're paying for an AI feature bundled into software you've already mostly stopped using.
☐	There's a recurring charge on your business card you can't immediately explain.
☐	You signed an annual AI plan you're paying monthly for at a markup.
☐	A free trial quietly turned into a paid subscription nobody cancelled.
☐	Two departments bought overlapping tools without knowing the other did.
☐	You're paying per-seat for people who left or never used it.
☐	No single person owns your AI and automation spend, so nobody questions it.
☐	You couldn't produce a one-page list of every AI tool you pay for in under five minutes.

Section A score: ___ / 12 checked.

Section B, The Missed Wins (money you're leaving on the table)

✓	Check
☐	A lead comes in after hours and nobody responds until the next morning.
☐	Quotes go out and follow-up is manual, inconsistent, or just doesn't happen.
☐	Your team retypes the same answers to customers all day.
☐	Someone spends hours each week building a report by hand.
☐	Onboarding a new customer is different every time and depends on who's free.
☐	Dormant customers go months with no contact and no win-back attempt.
☐	Your best salesperson's process lives only in their head.
☐	Routine back-office work (data entry, scheduling, invoicing chase) eats real hours.
☐	You can't see this week's key numbers without someone pulling them manually.
☐	Common customer questions aren't answered anywhere self-serve.
☐	Proposals or contracts are rebuilt from scratch each time.
☐	You've thought "AI could probably do this" about a task but never set it up.

Section B score: ___ / 12 checked.

How to read your score

Add both sections together for your total out of 24. These are honest, typical ranges, not guarantees. What you actually leak depends on your size and stack.

Total checks	What it usually means
0 to 4	You're tighter than most. A few quick wins, no emergency.
5 to 9	

Total checks	What it usually means
	Normal for a growing company. There's usually a few hundred to about a thousand a month hiding here.
10 to 15	You're likely bleeding real money, often \$500 to \$2,000 a month in waste plus missed revenue. Worth a hard look.
16+	You bought tools and never bought a person to run them. This is the most common, and the most fixable.

Where to start: the Tool-Srawl Audit Template in this Kit turns Section A into real dollar numbers. The Scorecard turns Section B into a priority. Run those two next.

One more thing.

Want the exact dollar figure on YOUR leaks instead of a range? That's a 30-minute free Scope Call. We look at your business together and I tell you straight whether there's enough here to be worth fixing.
