

The Kill-Your-Tool-Sprawl Audit

Bought a pile of tools, nobody runs half of them? List every tool below, add the monthly cost, and watch the total at the bottom. Most owners find a few hundred to a couple thousand a month they're paying for and not using.

\$200 value · your price: \$0

STEP 1 — LIST IT ALL

Your tool inventory

One row per tool, app, AI subscription, and automation. Be honest in the last two columns — that's where the money hides.

Tool name	Monthly cost	What it's supposed to do	Who actually uses it	Last time it produced a result	Keep / Cut / Consolidate
MONTHLY TOTAL	\$ _____	× 12 = \$ _____ / year. This is your full tool bill. Now circle every "Cut".			

STEP 2 — THE CONSOLIDATION MAP

Common overlaps that collapse into one

These are the stacks I see double- and triple-paid for most often. If your inventory above has two or more tools in any one row here, you've probably found a leak.

Scheduling + booking + reminders — One booking tool with built-in reminders usually replaces a separate scheduler, a reminder app, and a calendar add-on. **Typical recovery: \$40–\$120/mo**

Email marketing + CRM + forms — A single CRM with native email and forms often replaces a standalone email tool, a form builder, and a contact list app. **Typical recovery: \$80–\$300/mo**

AI writing + chatbot + transcription — One AI platform (or ChatGPT/Claude Team) commonly covers writing, support replies, and meeting notes that three point tools were doing. **Typical recovery: \$60–\$250/mo**

Project mgmt + docs + chat — An all-in-one workspace frequently replaces a task board, a separate docs tool, and a chat app nobody fully adopted. **Typical recovery: \$50–\$200/mo**

Multiple analytics / reporting tools — One dashboard pulling from your core systems usually replaces two or three siloed reporting tools and the hours spent stitching them together. **Typical recovery: \$30–\$400/mo**

What owners typically find

Most owners doing this for the first time uncover **\$300–\$2,000/month** they're paying for and not really using. That's framed as typical, not guaranteed — your number is whatever's actually in the table above.

Add up everything you marked "Cut." That number, times twelve, is your fastest win in this entire Kit.

I'll do this with you, deeper, in the assessment.

This template is the surface pass. In the paid assessment I go line by line with you, find the consolidations you can't see from the inside, and put a real annual figure on the bleed. Start with a free Scope Call to see if it's worth it for your business.
