# The AI Opportunity Scorecard

This is the 10-minute, self-serve version of the paid AI Opportunity Assessment. Rate your business 1 to 5 across six dimensions, add up your score, and you'll see which area to fix first. Honest self-assessment beats a perfect one, so go with your gut.

## Score yourself

For each row, circle the number that's true today. 1 is "this is a mess," 5 is "we've got this dialed."

| Dimension                 | Rate yourself, 1 to 5                                    | Circle one |
|---------------------------|----------------------------------------------------------|------------|
| 1. Data                   | Is your business data clean, in one place, and usable?   | 1 2 3 4 5  |
| 2. Tools                  | Do you have the right AI tools, and only the right ones? | 1 2 3 4 5  |
| 3. Team adoption          | Does your team actually use the AI you pay for?          | 1 2 3 4 5  |
| 4. Customer-facing AI     | Does AI help you respond and follow up with customers?   | 1 2 3 4 5  |
| 5. Back-office automation | Is repetitive internal work automated?                   | 1 2 3 4 5  |
| 6. Measurement            | Can you see whether any of it is working?                | 1 2 3 4 5  |

Add your six numbers. Total: \_\_\_\_\_ / 30.

For each dimension, the scale runs the same way:

- **1**, scattered, manual, or invisible. Money is leaking here.
- **3**, partly handled, inconsistent, depends on who's around.
- **5**, clean, automated, measured. This one's working.

## What your total means

These bands are typical patterns, not a verdict. Your lowest single dimension usually matters more than the total.

| Total    | Where you stand                                                                      |
|----------|--------------------------------------------------------------------------------------|
| 6 to 13  | Early. Lots of opportunity, and lots of quiet waste. The upside here is the biggest. |
| 14 to 21 | Mid-pack, like most growing companies. A few targeted fixes move you a lot.          |
| 22 to 30 | Ahead of the curve. The wins now are refinement and measurement, not overhaul.       |

## Read this next

Don't average it away. **Find your single lowest score.** That dimension is almost always where the fastest dollar return is hiding, because it's the thing currently leaking the most or producing the least.

- Lowest score in **Data or Tools?** Start with the Tool-Sprawl Audit in this Kit. That's waste you can cut this week.
- Lowest score in **Customer-facing or Back-office?** Those are usually missed-revenue and lost-hours problems. Bigger upside, worth a real plan.
- Lowest score in **Adoption or Measurement?** You probably already own the tools. The fix is process and ownership, not more software.

This is the 10-minute version. The paid AI Opportunity Assessment finds 3 to 5 specific opportunities with real dollar numbers on each, in about a week. The math is shown so you can check it.

### One more thing.

Got your lowest score? That's your starting point. The free Scope Call is where I look at your business and tell you whether the paid assessment would find enough to be worth it. If it wouldn't, I'll say so.

**Book your free Scope Call →**

No card, no pressure. If there's nothing worth fixing, I'll tell you straight.
